Burned Wall Panel

Burned steel plate with high-gloss lacquer finish

The Burned Collection features metal furniture shaped by the transformative power of heat. Through meticulous experiments on various metal surfaces, both mechanically and by hand this collection reveals the rich interplay of oxidation and color.

When metal is heated, it undergoes an oxidation process that produces a spectrum of hues, influenced by the metal type and temperature variations. Smaller temperature differences yield more monochromatic colors, while larger differences

create a vibrant array.

The methodology developed through these experiments is central to the Burned Collection, showcasing the dynamic and unique results of each heating process.
